What we can learn from the GENERA experience

GENERA was an EU-funded project related to gender equality in physics. More specific, 11 physics research institutions joined forces to design, implement and monitor gender equality plans (GEP) and gender equality measures. To sustain these activities GENERA Network/Community of Practice was established after the project ended in 2018. From the perspective of gender equality officers and practitioners Lia will draw on the experience of GENERA to share good practices and lessons learned.
